

Lex Machina's Attorney Data Engine™

Accurate and reliable attorney data that helps you win.

District Court attorney data that you may rely on to advise your clients is frequently inaccurate, incomplete, or flat out wrong. Many of the documents filed on PACER are erroneously missing the attorneys or law firms that worked on the case.

Lex Machina's exclusive Attorney Data Engine introduces new breakthrough functionality that dramatically enhances attorney data from PACER. With Lex Machina, you can now correctly identify attorneys associated with specific cases and the roles they played.
